Java O-O Program Visualizer/Animator

Milestone 2

By Prottasha Deb, Angelina Martis,
Arya Patel & Aiden Stensrud

Our Program

User Input

Users can input a Java program which is parsed into visualizer instructions.

Visualize

The visualizer will display the input program's memory data.

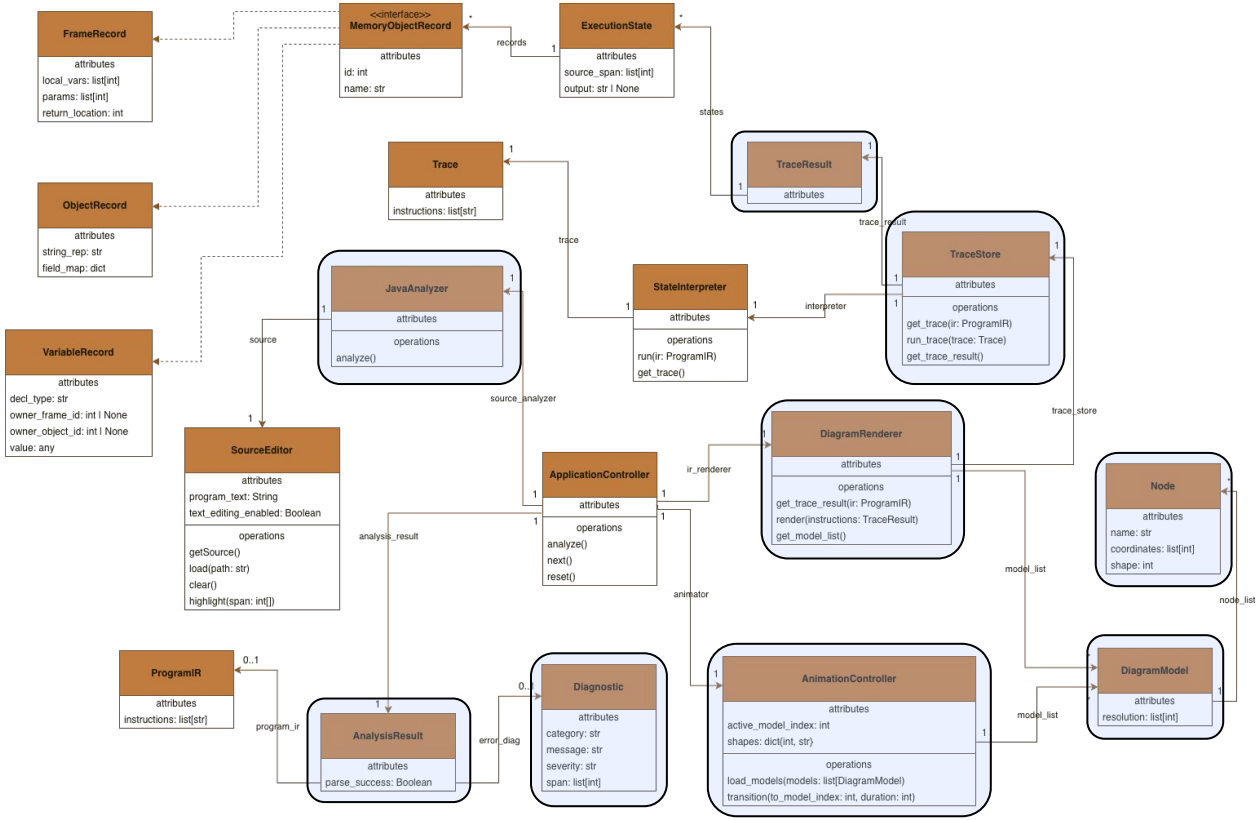

Animate

Users can iterate through the program and see the memory diagram shift.

Work Completed this Milestone

Java Code Parser

Syntax Analysis

Initial check for invalid character sets such letter/number strings.

Lexical Analysis

Use the language's grammar to check for invalid statements such as unclosed parenthesis.

AST Generation

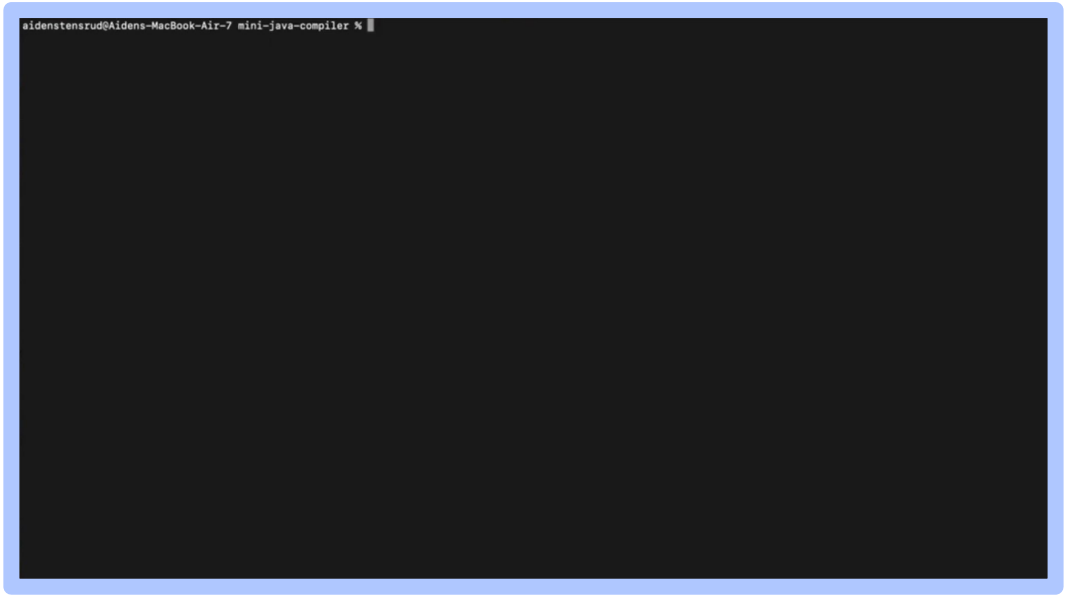

Generate a tree-like data structure from the program and the language's grammar.

Semantic Analysis

Use the AST to check for type mismatches and variable re-declarations.

Java Code Parser Demo

Memory Diagram Animation

Object Visualization

Display Java objects, variables, and their values using memory diagrams.

Reference Animation

Use animated arrows to show references between variables and objects.

Step-by-Step Execution

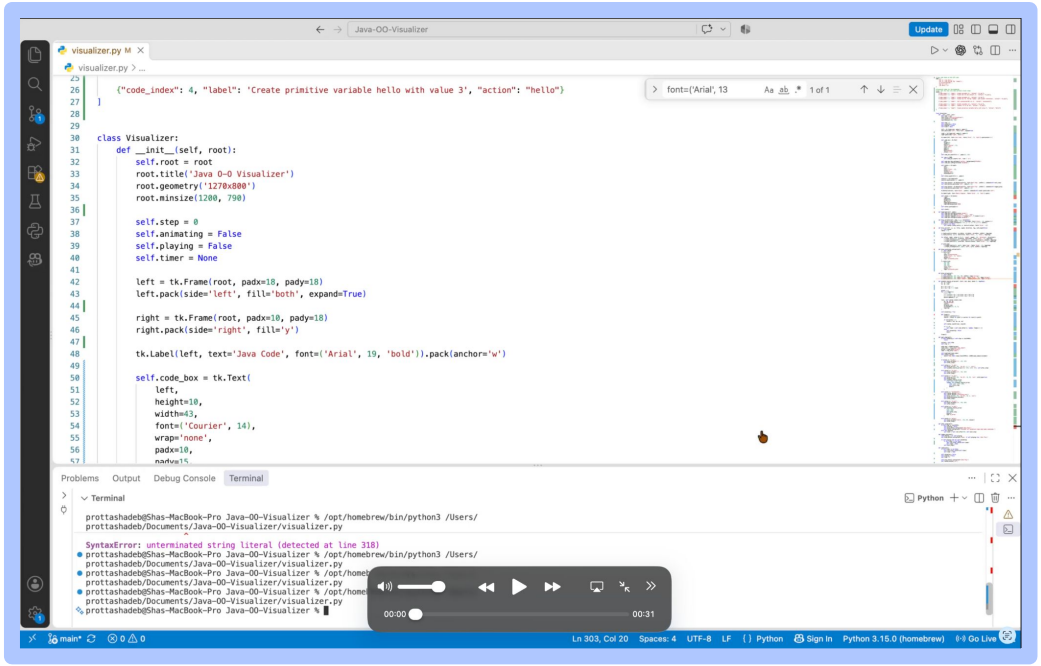

Highlight Java statements and visualize memory changes one step at a time.

Playback Controls

Navigate the simulation using Next Step, Auto Play, and Reset.

Java Code Animator Demo

Memory Diagram Generator

User Input

Users input a text file representing the memory state as a list of variables, class objects, and references.

Generate

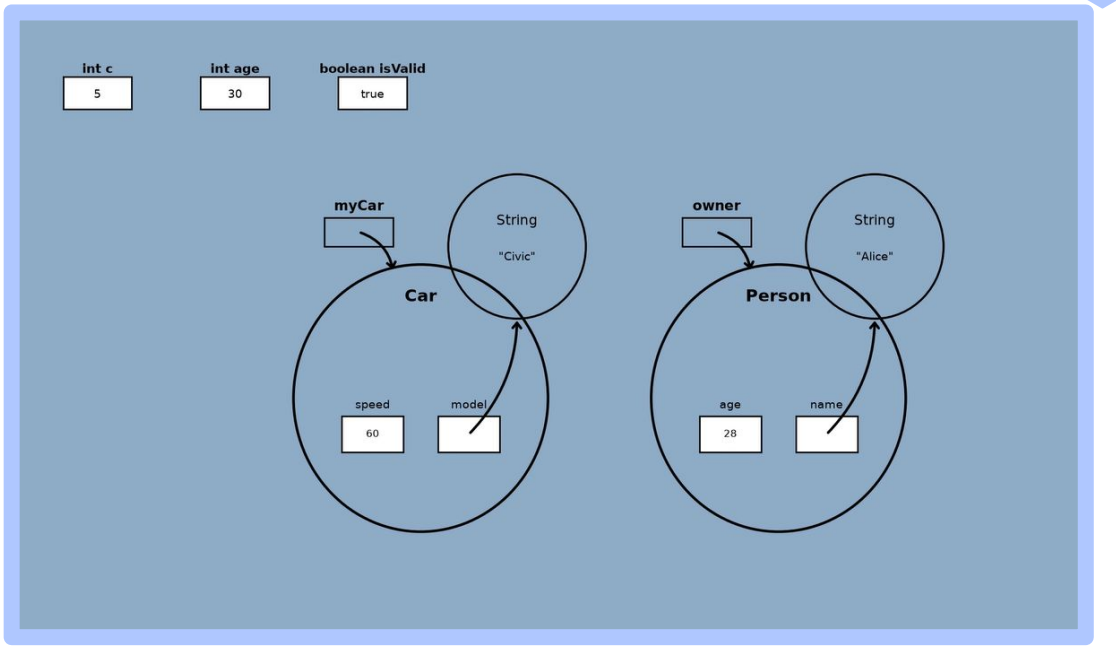

The generator draws the variables, objects, and reference pointers according to the information in the text file.

Render

Users can view the rendered memory diagram.
